TRACTORS

Hilux Autoelectric offers extensive line of long lasting heavy duty farm equipment lighting and tractor parts including Fuel water separator, SMV Emblems, USB Charger, Beacon warning lights, LED Work lamps, LED Lit Logos, Plastic tool boxes, mirror etc.

The operating conditions for use in Agricultural industry present additional challenges for lighting. Since, change in climate weather, daily use for hours at a time, as well as shocks and imports are a daily occurrence.

The new LED work light The work light known as "Modular Worklight" the "Modular Work light", glare-free illumination variant ZEROGLARE. The light is specially radiated onto the surface in front of the vehicle so that drivers of oncoming vehicles are not dazzled. This significantly increases safety and working comfort.

TRACTORS

Hilux Autoelectric through its experience of several year produce lightings & parts for tractors to meet stringent environmental conditions. All parts are subject to various tests to meet increased requirements for stability and resistance to dirt, humidity, UV & water.

CONSTRUCTION EQUIPMENT

Hilux Autoelectric offers a comprehensive performance portfolio in the construction machinery sector that includes high-quality lighting products. This includes vehicle lighting in the form of work lights, front and rear lighting, beacons and interior lighting, as well as Fuel water separator . The quality and performance of all Hilux products are carefully optimized to the specific requirements of the construction machinery sector.

The quality of our products is influenced by many factors. The main advantage is the fact that all of our products are manufactured inhouse and they are our own solutions - from design to implementation. Due to many years of experience, continuous development and rigorous testing of materials, we manufacture outstanding products which are appreciated by all of our customers.

FORKLIFT

All forklift trucks are equipped with LED warning lights. High-brightness light beams are installed in front, back, left and right of the forklift truck body to project onto the road surface, generating clear blue light and light beams around and moving along with the movement of the forklift truck. Especially in noisy working environment, when the sound warning cannot meet the safety requirements, the warning light will play an important role in reminding the surrounding workers to prevent forklift accidents.

Forklift safety warning light is a warning function that an LED lamp emits a blue light or red light onto the ground through a condensing concave-convex ball. Because red is the primary color system & has warning function, while blue is the primary color in the cold system, which is in sharp contrast with red & can attract people's attention. Forklift warning alarm is a reverse alarm emitting sound > 105db to alarm the workers in working zone for passing forklift operation.

Hilux provides complete solution for forklift lighting & provides complete lighting kit which includes work light, zone light blue arrow light, arc light, reverse alarm, minibars & front direction indicators & rear, stop and tail light.

WORKLIGHTS – COMPARISON HALOGEN VERSUS LED

LED work lights with the light output creates a large & bright field of illumination with very uniform light distribution. The light color of LED work lamps corresponds to day light & ensures good visibility which means less fatigue on the eyes while working.

Conventional Halogen H3 Work Lights

The conventional H3 halogen work lights produce luminous intensity of about 500 lumens for a power consumption of 55W. The dim yellowish light & irregular illumination can be very tiring to eyes.

LED Work Lights

Anyone who works in the dark has to rely on a good light for safe & protective work. The operating conditions for use in agriculture & the construction equipment industry in particular present additional difficult challenges for work light, since changes in climate & weather, daily use for hours & time, as well as shops & impacts are a daily occurrence.

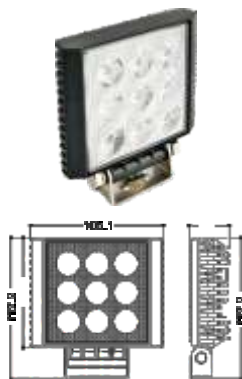

Hilux work lights are made for these demanding task. The material used meets the increased requirement for stability & resistance to dirt & humidity as also proven by our quality test.

Converting To LED technology offer following advantages –

More efficient lighting increases safety, specially when maneuvering, coupling units or working in difficult terrain.

Converting to LEDs saves fuel & increase the alternator efficiency

LED work lamps not only have more than 130 times the service life of halogen, they are also reliable and entirely maintenance free.

All light function of full LED combination rear lamp (tail light, stop light, direction indicator, reflex reflector) exclusively feature **LED technology**.

The tail light function is produced by small thickness diffuser & producing illumination which is especially homogeneous. Exceptionally visible in dark & thus enhances road safety, 12V & 24V variants of this extremely flat surface-mounted full LED light are available for tractors & trailers,

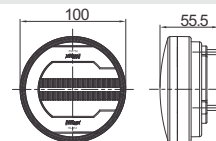

LED MULTI FUNCTIONAL LAMP : Complete Flexibility At The Rear .The combined rear light , stop light and indicator is available with diffused position lamp in signature C shape.The function rear stop light and direction indicator is realised in LED technology, thus facilitating particularly economical use and making both vehicle and trailer significantly more recognisable and therefore much safer driving on road.This program is complemented with version of front combination lamp FCL AND Rear function lamp RCL suitable for tractors and has AIS approvals.Suitable for Application like Electric Buses,E rickshaw, tractor and trailers.
